

Datasheet

GM10 Propulsion system

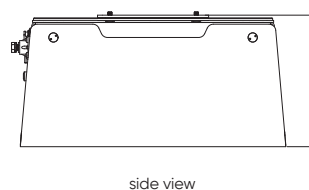

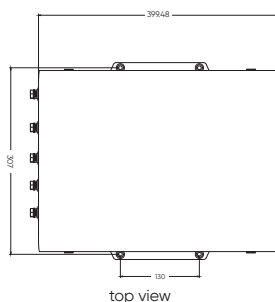

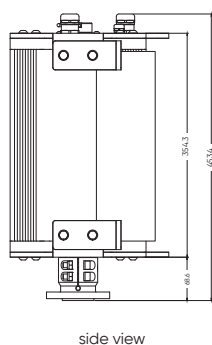

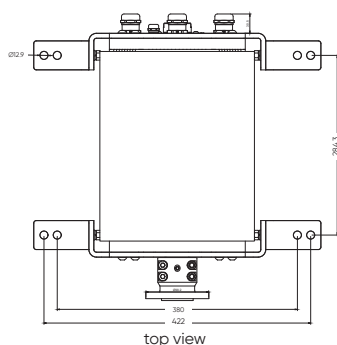

This datasheet gives the detailed specifications of the propulsion system. Our 10 kW propulsion system combines power, efficiency and reliability to meet the highest performance requirements, both for leisure boats and professional use. The 10 kW electric motor is developed for exceptional performance, long life and minimal maintenance. Thanks to the compact and robust design, the motor is easy to install.

Parameter	Value
Motor type	3-phase permanent magnet synchronous motor (PMSM)
Nominal power output	10 kW
Comparable power output in hp	30 hp diesel engine
Battery voltage	40V – 65V (48 Vdc nominal)
Torque	80 Nm
Nominal RPM	1200 RPM
Transmission	None (direct-drive)
Motor weight	approx. 60 kg
Motor shaft diameter	30 mm
Cooling motor/controller	Air
Ambient temperature range	-20 °C ~ 60 °C
Communication protocol	CANbus (NMEA converter available)
IP-class motor/controller	IP68
Battery cable size (minimal)	70 mm ²
Thrust bearing required	No, but recommended

Operation & Monitoring

Add accessories to your propulsion system to create a system completely tailored to your needs.

Type of boats

up to 5 tonnes

up to 10 meter

This is an indication on whether the propulsion system is suitable for a certain boat. It does not take into account the type of boat and the use of the boat. Contact us for a customized advice.

Battery

For this propulsion system we recommend at least 2 GM lithium batteries. You can easily expand these with more batteries for a longer range and/or with a range extender (generator, solar panels and/or wind turbine) for unlimited boating.

Propeller

15" x 9"

3-blade

(speed 11 to 13 km/h)

Note: This is a guideline only; the propeller choice depends on your boat type, engine power, and sailing profile. Always consult us or your supplier for advice. Often, you can keep your current propeller; only maintenance or adjustment is required.

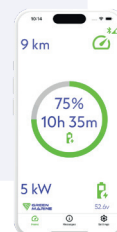

Installation

Motor mounts are supplied as standard for the installation of the electric motor.

Download the GM app

Monitor your electric propulsion system directly from your phone.
